SHA Operator Certification, De-Certification & Re-Certification

Training and documentation must be specific to equipment, environment and operator under OSHA regulations. Separate documentation for Classroom Training Certification and "On Site" Environment Training Certification will be presented to successful trainees based upon individual test results. **Once certification has occurred, any change in equipment, environment or operator physical or mental capacity from that which was specifically trained and tested causes immediate de-certification to occur and the need for re-certification before the operator can legally perform operator work functions under the changed conditions.** Even if no such condition change occurs, de-certification occurs as a matter of law three years after the prior date of certification causing the need for re-certification. **It is the sole responsibility of the operator and employer to monitor both as to any change of conditions and 3-year expiration.** Forklifts of Minnesota, Inc. does not assume or undertake any duty to monitor your potential change conditions or time expiration.
